

ABSTRACT

Teaching methods commonly require dynamic presentation techniques. Cellular phone technology can be utilized as a remote control via Bluetooth. Several experiments are conducted in simple ways to measure the effective distance between the device cell phone-notebook and PC-cell phone. Based on the research, it is concluded that local cell phones turned out to be acceptable as a teaching device utilized at campus.

Keywords: *cellular phone, Bluetooth, remote control, teaching*

ABSTRAK

Pada umumnya metode pengajaran memerlukan teknik presentasi yang dinamis. Teknologi telepon seluler dapat dimanfaatkan sebagai remote control melalui media Bluetooth. Beberapa percobaan dilakukan dengan cara sederhana untuk mengukur Jarak efektif antara piranti ponsel-notebook dan ponsel-PC. Berdasarkan hasil penelitian, bisa disimpulkan bahwa ponsel lokal ternyata cukup memadai sebagai alat bantu proses pengajaran di kampus.
